

### PRODUCT FEATURES

Designed for pressing and smoothing wallpapers, even spreading of the glue under the wallpaper, removing folds or air bubbles formed during wallpapering. The ergonomic two-component TPR handle provides a comfortable grip during work. Dense, four-row embedding of the bristles in the frame allows for accurate and even distribution of the glue under the wallpaper. The length of the bristles minimizes the risk of accidental damage to the wallpaper caused by the brush holder. The bristles are made from plastic with an appropriate degree of elasticity, they do not absorb water and are easy to clean. The brush is also used for everyday use in workshops, garages, cars, households, etc. It has a hole enabling to hang the tool.
